file ID bbmg/028bitter

Bittersweet is a vine which puts out bright red and yellow leaves and berries in the Fall. It belongs to the Celastraceae family (but you already knew that). You see it everywhere - it's certainly pretty but (scary chord please) it has a sinister side - besides being poisonous, it can choke its host tree to death! (Insert 'eeewwww' here.)

It's what botanists refer to as an 'invasive species', meaning it came from elsewhere and settled here (which describes about 85% of the local human inhabitants of Cape Cod as well).
